

EX.NO:5 ADT STACK USING EXCEPTION HANDLING

PROGRAM:

```
import java.io.*;
interface Mystack
{
    void push();
    void pop();
    void display();
}
class Stack_array implements Mystack
{
    final int n = 5;
    int stack[] = new int[n];
    int top = -1;
    public void push()
    {
        try
        {
            BufferedReader br = new BufferedReader(new InputStreamReader(System.in));
            if(top == n - 1)
            {
                System.out.println("Stack Overflow");
                return;
            }
            System.out.print("Enter the element: ");
            int ele = Integer.parseInt(br.readLine());
            stack[++top] = ele;
        }
        catch(Exception e)
        {
            System.out.println(e);
        }
    }
    public void pop()
    {
        if(top == -1)
        {
            System.out.println("Stack Underflow");
            return;
        }
        System.out.println("Popped Element: " + stack[top]);
        top--;
    }
    public void display()
    {
        if(top == -1)
        {
            System.out.println("Stack is Empty");
            return;
        }
        System.out.println("Stack Elements:");
    }
}
```

```

        for(int i = top; i >= 0; i--)
        {
            System.out.println(stack[i]);
        }
    }
}

public class Main
{
    public static void main(String args[]) throws Exception
    {
        BufferedReader br = new BufferedReader(new InputStreamReader(System.in));

                case 2:
                    stk.pop();
                    break;
                case 3:
                    stk.display();
                    break;
                case 4:
                    System.out.println("Program Ended");
                    break;
                default:
                    System.out.println("Invalid Choice");
            }
        } while(ch != 4);
    }
}

```

OUTPUT:

*** STACK USING ARRAY ***

1. Push
2. Pop
3. Display
4. Exit

Enter your choice: 1

Enter the element: 10

*** STACK USING ARRAY ***

1. Push
2. Pop
3. Display
4. Exit

Enter your choice: 1

Enter the element: 20

*** STACK USING ARRAY ***

1. Push
2. Pop
3. Display
4. Exit

Enter your choice: 3

Stack Elements:

20

10

EX.NO:6 DEMONSTRATE THE USE OF WRAPPER CLASSES AND AUTOBOXING

PROGRAM:

```
public class WrapperClassDemo
{
    public static void main(String[] args)
    {
        // Primitive Data Types
        int primitiveInt = 100;
        float primitiveFloat = 25.75f;
        char primitiveChar = 'A';
        boolean primitiveBoolean = true;

        // Autoboxing
        Integer wrappedInt = primitiveInt;
        Float wrappedFloat = primitiveFloat;
        Character wrappedChar = primitiveChar;
        Boolean wrappedBoolean = primitiveBoolean;
        System.out.println("Autoboxed Integer: " + wrappedInt);
        System.out.println("Autoboxed Float: " + wrappedFloat);
        System.out.println("Autoboxed Character: " + wrappedChar);
        System.out.println("Autoboxed Boolean: " + wrappedBoolean);

        // Unboxing
        int unboxedInt = wrappedInt;
        float unboxedFloat = wrappedFloat;
        char unboxedChar = wrappedChar;
        boolean unboxedBoolean = wrappedBoolean;
        System.out.println("Unboxed int: " + unboxedInt);
        System.out.println("Unboxed float: " + unboxedFloat);
        System.out.println("Unboxed char: " + unboxedChar);
        System.out.println("Unboxed boolean: " + unboxedBoolean);

        // Parsing Strings
        String intString = "300";
        Integer parsedInt = Integer.parseInt(intString);
        String floatString = "75.25";
        Float parsedFloat = Float.parseFloat(floatString);
        String charString = "C";
        Character parsedChar = charString.charAt(0);
        String booleanString = "true";
        Boolean parsedBoolean = Boolean.parseBoolean(booleanString);
        System.out.println("Parsed and Autoboxed Integer: " + parsedInt);
        System.out.println("Parsed and Autoboxed Float: " + parsedFloat);
        System.out.println("Parsed and Autoboxed Character: " + parsedChar);
        System.out.println("Parsed and Autoboxed Boolean: " + parsedBoolean);
    }
}
```

OUTPUT:

Autoboxed Integer: 100
Autoboxed Float: 25.75
Autoboxed Character: A
Autoboxed Boolean: true
Unboxed int: 100
Unboxed float: 25.75
Unboxed char: A
Unboxed boolean: true
Parsed and Autoboxed Integer: 300
Parsed and Autoboxed Float: 75.25
Parsed and Autoboxed Character: C
Parsed and Autoboxed Boolean: true
